

ABSTRACT

LENS

5 A lens (1) is described comprising a curved surface (2), a
plane surface (3) and a holding edge (4) moulded onto the
lens edge, which is pressed bright on both sides. A
supporting edge (5) which projects towards the plane
surface (3) is moulded onto the holding edge. Such lenses
are preferably used for projection headlights for motor
vehicles. A method of manufacture for such lenses is also
10 specified.
